

QUALITY PRODUCTS FROM RECYCLED RUBBER GRANULES

SOLUTIONS FOR SAFETY AND COMFORT IN DAILY LIFE

ABOUT THE COMPANY

KRAIBURG Relastec GmbH & Co. KG is an independent enterprise in the KRAIBURG-Holding. We supply the international market with ready-to-install products for acoustic and vibration insulation (DAMTEC®), impact protection (EUROFLEX®), structural protection (KRAITEC®), anti-slip mats for securing loads (KARGOTEC®), sports floor coverings and elastic layers (SPORTEC®) as well as elastic flooring systems for equestrian facilities (KOMFORTEX®).

Modern technology and constant product development recommend us as a qualified partner for architects, planning engineers and system providers. With rubber recycling as our central focus, KRAIBURG Relastec GmbH & Co. KG takes in up to 60,000 tons of recycled raw materials and turns them into high quality products.

In a long line of rubber recycling companies, KRAIBURG relastec is one of the largest rubber recycling companies world-wide. Based on many years of experience and processes that are constantly being reviewed and improved, KRAIBURG Relastec manufactures new products from technical rubber materials, saving resources and making a positive contribution to the environment.

SUSTAINABILITY

As a recycling company, we have a special responsibility when it comes to environmental compatibility.

Further information is also available in our sustainability booklet, which can be downloaded from our website.

Processing up to 60,000t of recycled material

Every year, we recycle up to 60,000 tons of scrap rubber and upcycle them into new generation rubber products.

Reduction of CO2 emissions

By using recycled rubber granules, we save more than 130,000 t of CO₂ emissions annually compared to using virgin rubber.

Corporate Carbon Footprint

Finalised in 2022, the CCF was reviewed in accordance with the Greenhouse Gas Protocol.

Coming soon: Product Carbon Footprint

The PCF is tested in accordance with ISO 14067 and ISO 14040/44.

Quality and Energy Management

Our energy management system is certified according to ISO 50001 and our quality management system according to ISO 9001.

Certificates

With certificates such as the ecovadis CSR rating, the TÜV SÜD manufacturing plant certification or the IQ-Net Certified Management System, we provide the best possible proof of our quality claims.

Member of the initiative NEW LIFE

The declared goal of this campaign is to demonstrate to the media, politicians and the general public the advantages of recycled products made from end-of-life tires (ELT) and to motivate them to act sustainably.

Economic sustainability

As a family business, KRAIBURG Holding pursues a long-term strategy. Profits generated are used to a significant extent to make our entire business model ever more efficient and future-proof.

MANY RAW MATERIALS, MULTIPLE APPLICATION POSSIBILITIES

Valuable secondary material, such as rubber offcuts, unsold product lines or even used tires represent the starting material for our products. We sort, granulate and process these raw materials into new products, thus making our contribution to the circular economy.

The areas of application are as diverse as the raw material itself. Our products are used in the construction industry and logistics, as well as on playgrounds and sports fields. On the following pages, you will find the variety of areas of use in more detail.

KRAITEC®

Structural Protection

SPORTEC®

Sports Flooring
and Elastic Layers

EUROFLEX®

Impact Protection and
Playground Accessories

DAMTEC®

Acoustics and Vibration Isolation

KOMFORTEX®

Horse Flooring systems

KARGOTEC®

Anti-slip mats for securing loads

FUN AND PLAY

SAFETY. **LEISURE.**

CREATIVITY.

For safe playing areas.

Playgrounds come alive with products from our EUROFLEX® division featuring customizable colors and motifs. This stimulates children's creativity and enjoyment of play whilst offering impact protection and minimising the risk of injury.

Our DAMTEC® acoustic products also protect adjacent rooms from excessive noise levels that tend to occur on lively playgrounds. This means that play areas can also be seamlessly integrated into residential and hotel buildings.

EDUCATION

ACOUSTIC INSULATION.

SLIP RESISTANCE.

COLOURFUL DESIGNS.

Schools. Kindergartens. Museums.

A floor that reduces impact sound and is slip-resistant is vital for schools, kindergartens or even museums in order to ensure peace and quiet, prevent injuries and focus on learning. Walkways or other areas can be visually marked out by different colours or patterns.

Colourful designs with different shapes or motifs, for example in kindergartens, are easy to realize with our products.

FITNESS

STYLE. OPTIMAL PROTECTION.

RESILIENCE.

For safe workouts at the gym.

To ensure a comfortable experience, the floor covering has to meet certain demands. Durable elasticity is of crucial importance in order to ensure ergonomic and protective properties. Vibration- and sound-reducing qualities must also be provided in order to avoid high noise levels causing problems with neighbouring facilities.

Particularly in free weight areas, it is equally important to protect the surface from damage caused by falling weights. In both scenarios SPORTEC® products are an ideal solution.

SPORT

PLAYER COMFORT.

RESILIENCE.

FORCE REDUCTION.

Ball sports. Track and Field. Winter sports.

Layers for running tracks that are easy on the joints? Basketball courts with high ball rebound? Weather-resistant and fast-drying surfaces for outdoor use? Non-slip areas in winter ski resorts?

Or simply a visual highlight? The SPORTEC® division has an answer to each of these questions.

HORSEKEEPING

SLIP RESISTANCE.

EASY CLEANING.

JOINT PROTECTION.

Safety and well-being for horses.

In equestrian facilities, the well-being of the horses is the highest priority. This naturally results in the need for an environment that is as safe and stress-free as possible.

Accordingly, in the KOMFORTEX® division you will find floor coverings that make walkways and paddocks particularly gentle on hooves and ensure a pleasant area for both the animals and their trainers. To minimize the risk of tripping at the edges of riding areas, edgings are also available in various shapes and colors.

URBAN SPACES

VARIATION. SLIP RESISTANCE.

FREEDOM OF DESIGN.

For a brighter urban life.

Urban areas are not always a feast for the eyes. We can provide a solution to that. Whether with creative design elements from the EUROFLEX® division or colorful outdoor floor coverings from the SPORTEC® division, there are no limits to design possibilities.

GREEN ROOFS AND LANDSCAPING

OPTIMAL PROTECTION.

DURABILITY.

WATER DRAINAGE.

For a greener cityscape.

Urban living space is scarce. Apart from a few parks, most city residents have no green spaces for recreation. Also problematic: the advancing sealing of surfaces, which causes temperatures in cities to rise more and more. That's why it's only natural to turn the flat roofs of apartment buildings or office buildings into „green oases“. This raises the quality of life and ensures a better climate in cities.

Of course, green roofs also present technical challenges. For example, protecting the sealing layers from mechanical damage and stagnant water is particularly important and our building protection division KRAITEC® offers comprehensive solutions.

FLAT ROOFS

OPTIMAL PROTECTION. DURABILITY.
TESTED FIRE BEHAVIOUR.

Solutions for technical installations such as photovoltaics, home ventilation or heat pumps.

The waterproofing membrane of a building must be protected from mechanical damage caused by the different technical setups on flat roofs. This prevents the penetration of water and moisture into the fabric of the building.

Of course, these devices also require regular maintenance. Therefore, maintenance walkways are mandatory to guarantee optimal protection of the waterproofing membrane and to ensure accessibility to the equipment. Products from the KRAITEC® division are suitable for both cases.

TERRACES AND BALCONIES

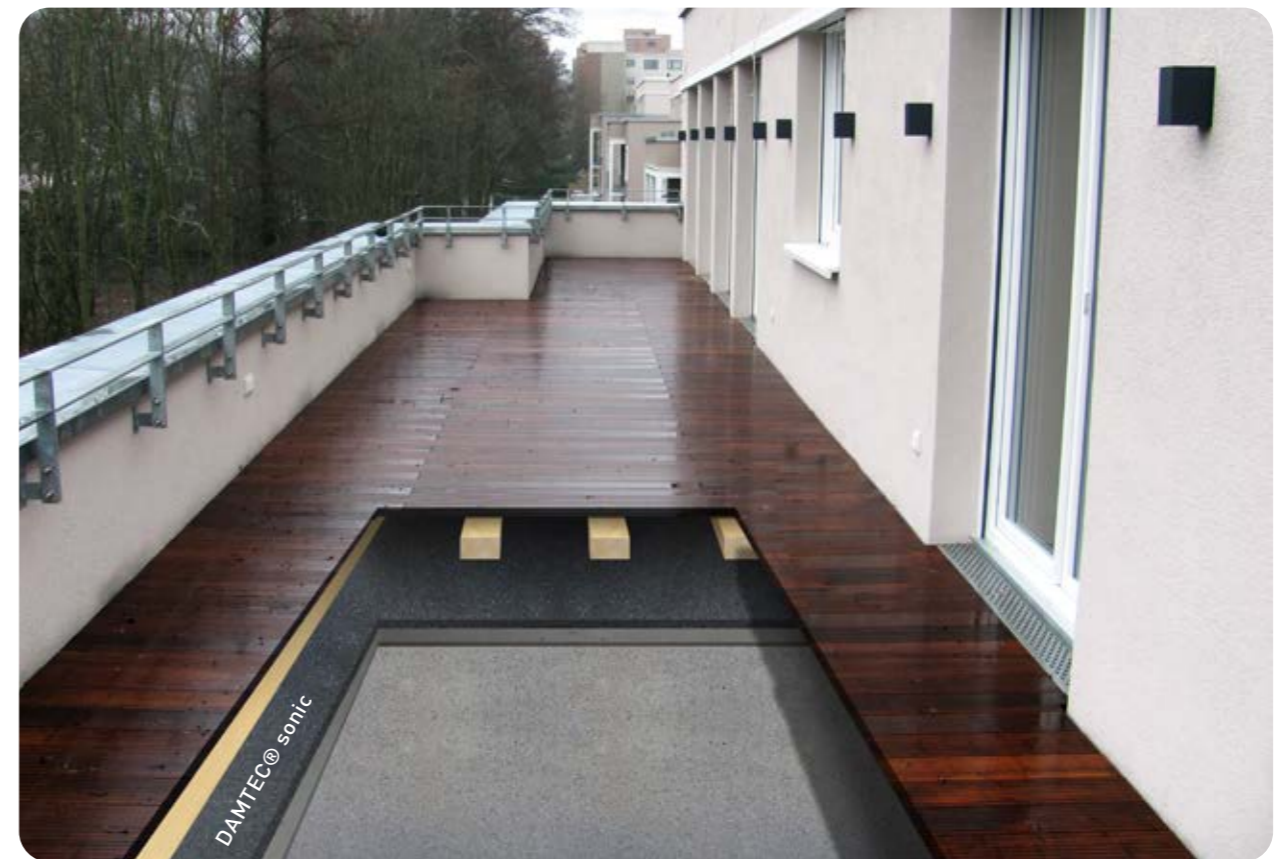

SLIP RESISTANCE. **ACOUSTIC ISOLATION.**
TESTED FIRE BEHAVIOUR.

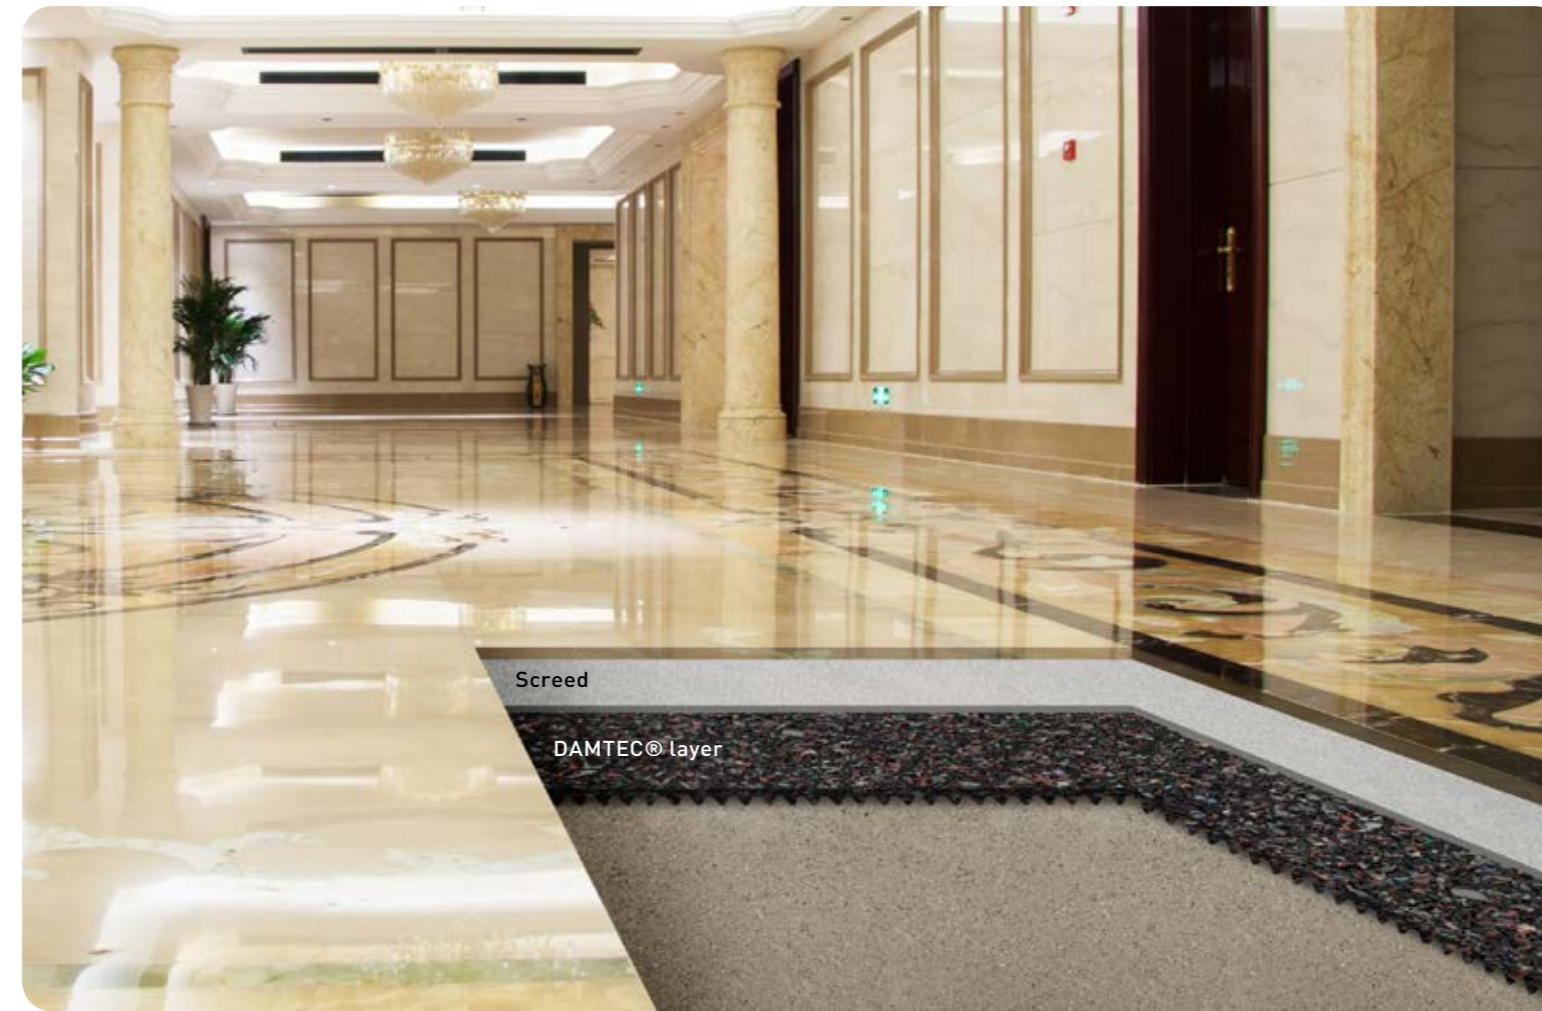

For open spaces on and around buildings.

Whether on private terraces for relaxing or on busy walkway balconies, with our KRAITEC® products we offer a wide range of design options with protective walkway slabs.

Impact noise reduction under terrace and floor coverings is also possible with the DAMTEC® sonic series.

LIVING AND RELAXING

ACOUSTIC INSULATION.

DURABILITY.

WALKING COMFORT.

Living comfortably and without disturbance.

Home means peace and comfort and that is exactly what our DAMTEC® products make possible. As insulating underlays installed under floor coverings such as PVC, laminate, parquet or carpet, but also under screed, they protect adjacent rooms from impact sound and thus ensure a pleasant living atmosphere.

Even rooms used for noisy activities, such as gyms, can be combined with residential units without having to put up with increased noise pollution.

BUSINESS AND WORK

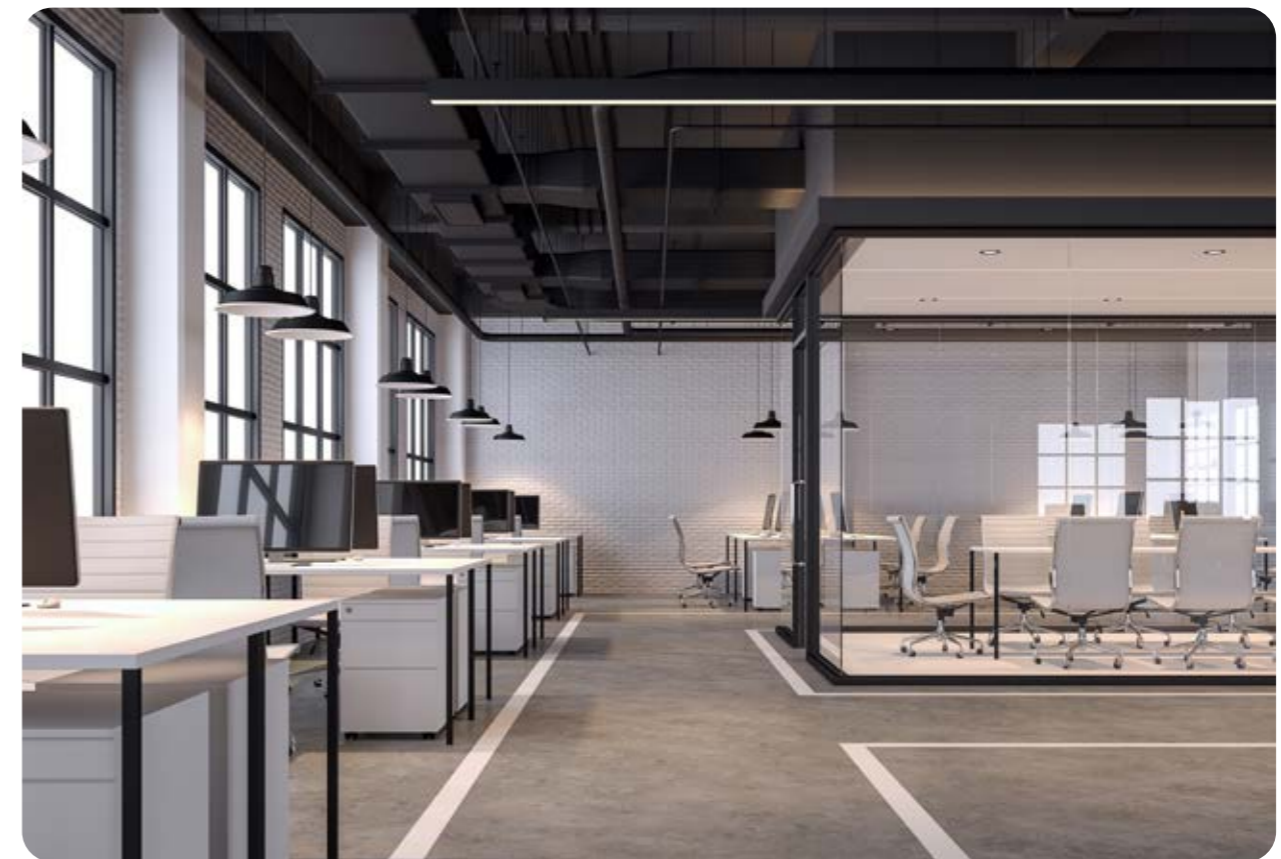

LONGEVITY. ACOUSTIC INSULATION.

FREEDOM OF DESIGN.

Stores. Malls. Offices. Events.

Whether it's our DAMTEC® products for acoustic insulation in offices for a pleasant working atmosphere, SPORTEC® surfaces for diverse floor designs combined with a high fire protection class and good slip resistance in shopping centers and stores, or the EUROFLEX® Visual System for absolute design freedom, we offer high-quality solutions for all business and work areas.

INDUSTRY

DURABILITY. RESILIENCE.

VIBRATION ISOLATION.

Decoupling of building and machine foundations.

Factory floors and warehouses are a hot spot for all kinds of vibration sources. Whether generators, pumps, pallet trucks or forklifts, they all cause vibrations that can have a damaging effect on both the working environment and sensitive equipment.

For this reason, the foundations of buildings and machines are decoupled with products from the DAMTEC® division in order to limit the transmission of vibrations as much as possible.

RAILWAYS

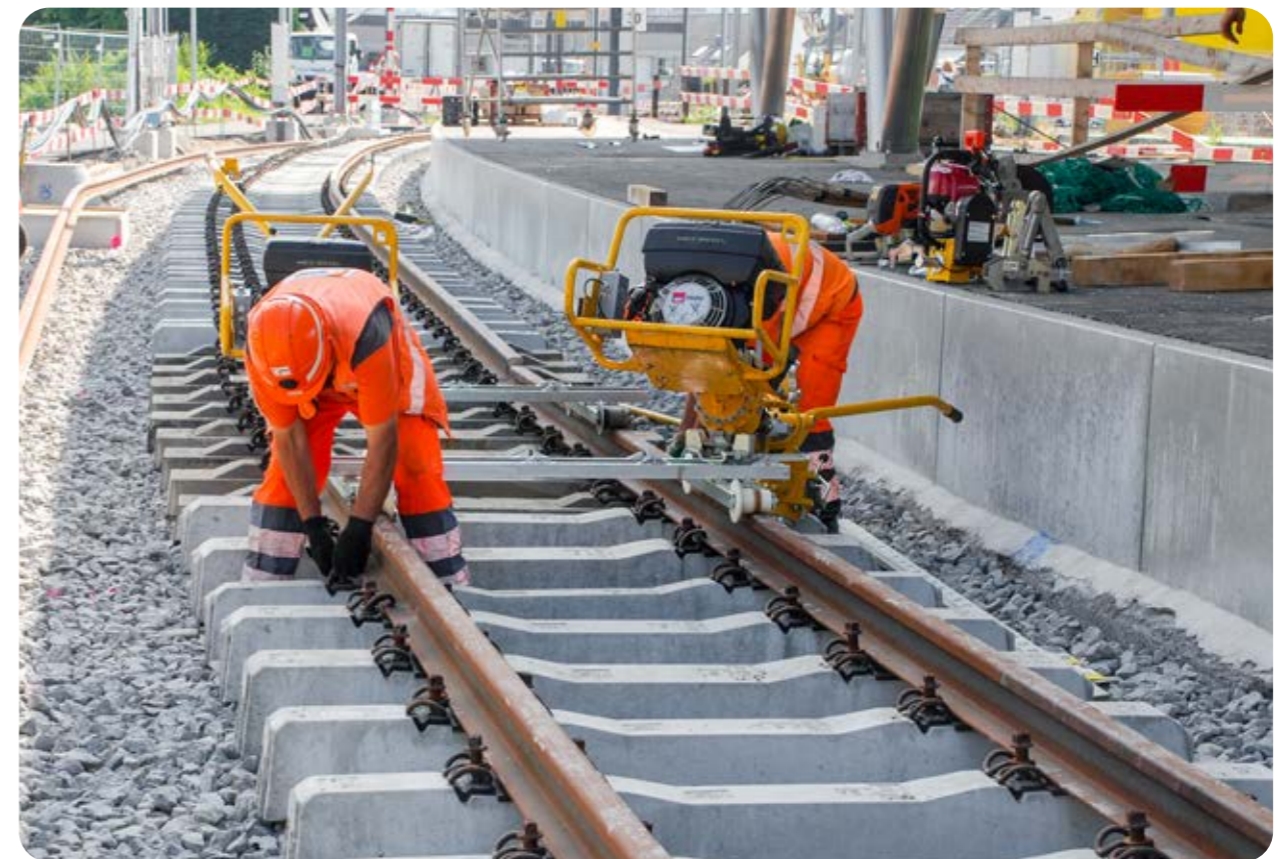

DURABILITY. **ACOUSTIC INSULATION.**
VIBRATION ISOLATION.

For quieter and more durable railway lines.

Frequently used track systems and adjacent buildings are constantly exposed to high levels of mechanical stress. Over time, vibrations can cause damage to both the track and adjacent buildings. Noise also represents a nuisance for residents.

Our products from the DAMTEC® division are installed under railway tracks to reduce vibrations and effectively limit sound transmission.

SECURING LOADS

SLIP RESISTANCE.

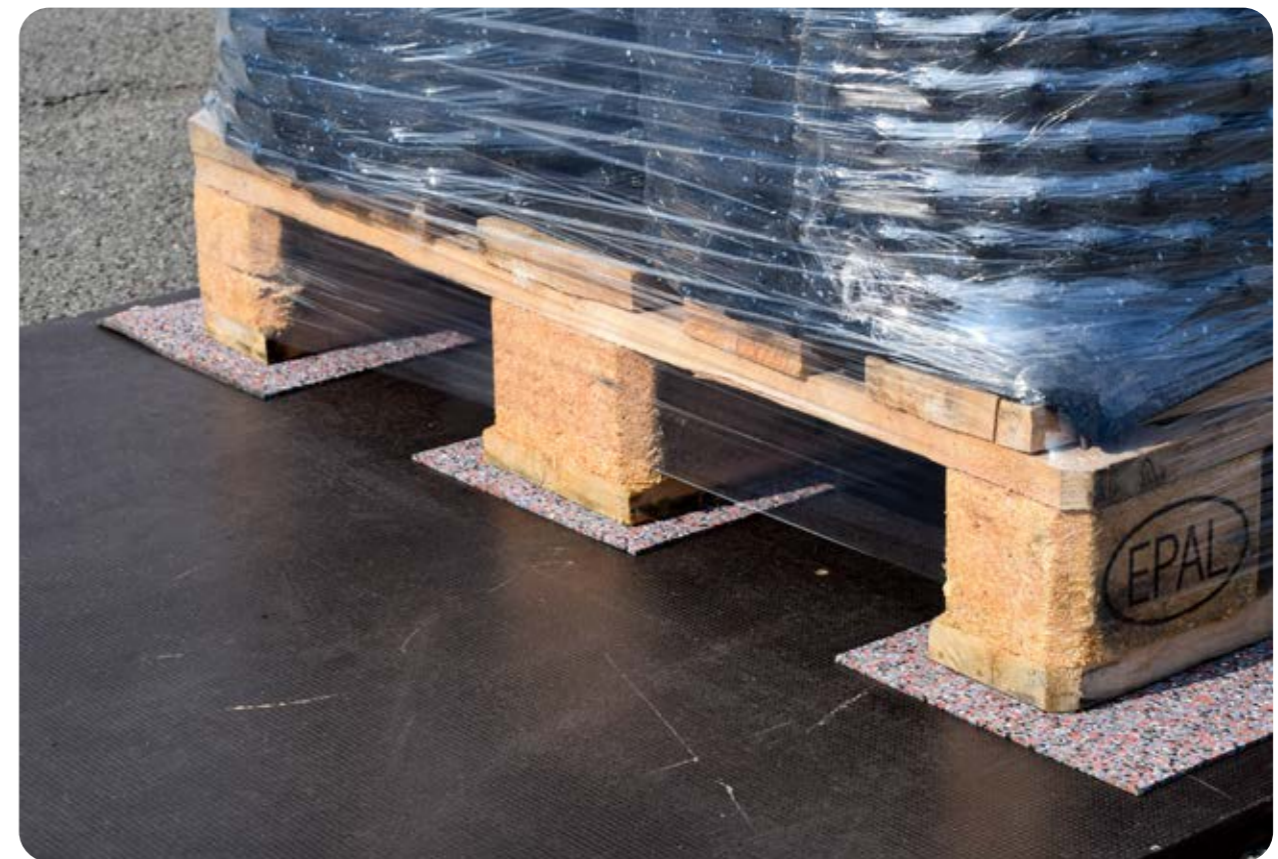

FLEXIBILITY.

COST EFFICIENCY.

For a safe transport of goods.

Global trade is growing and traffic routes are pulsating. Rails connect the metropolises. Ships and airplanes cover long distances. Trucks are filling the roads. This huge network forms the backbone of our globalized economy.

Our anti-slip mats from the KARGOTEC® division play a significant role in ensuring that this can happen as safely as possible. They allow almost any type of cargo to be secured.

WHAT SETS US APART

In addition to our innovative products, which are manufactured exclusively in Germany, our company offers many other advantages.

Made in Germany

Product quality

Our products meet the highest quality standards.

They are durable, made of high quality raw materials and at the same time contribute to protecting the environment.

Innovation and product design

We continuously develop new products according to the requirements of our customers and the market.

Personal Contacts

We do not hide behind support hotlines and contact forms. With us, you have dedicated, competent contact persons.

Flexibility with customer requirements

We offer our partners customised options for packaging, labelling and delivery, labelling and delivery.

Long-term relationships

We maintain long-term relationships with our customers and suppliers based on mutual respect and fairness.

Marketing support

We provide you with the best possible support in the form of images or in the design of your documents.

Easy complaint management

We stand for simple and fast complaint management.

Transparent and optimized processes ensure rapid processing.

Internationality

With an export quota of over 50%, we have already exported our products to over 100 countries around the globe.

CORPORATE CULTURE

Based on our mission as a global company, we have defined our values, social norms and guidelines for joint action and cooperation with our workforce, customers and partners. Our vision is based on these premises.

Download our „Corporate culture“ booklet for more detailed information.

Respect

Respectful, open and appreciative interaction is the basis for good cooperation. This applies not only within the company, but also in our dealings with partners and suppliers.

Equal opportunities

For us, diversity means strength and it contributes to the success of our company. We insist on a corporate culture in which all employees have the same opportunities, regardless of their ethnicity, origin, political views, age, religion, gender, sexual orientation or disability.

Social responsibility

At KRAIBURG Relastec, social responsibility means more than simply complying with laws and regulations. Our employees are our most valuable asset. That is why we pay attention to maintaining their health, to ergonomics at the workplaces and to avoid any obstructions which prevent them performing their activities. In doing so, we strive for constant improvement.

Strong decision-making powers

Decisions are made based on our strategy and values. Feedback, suggestions and know-how from the teams are an integral part of the decision-making process.

Responsibility for our actions

We take responsibility for all decisions and outcomes. Error acceptance and the urge to rectify and learn from errors as quickly as possible are firmly anchored in our culture.

Transparency

Open communication inside and outside our company is the basis for transparency in our dealings with employees, partners and suppliers of KRAIBURG Relastec.
